

# Google Cloud Directory multiple- domain support (Percolator)

# Problem > Solution > Benefit

Admins managing multi domain environments with identical usernames in PaperCut NG/MF

We use UPN username support ([user@domain.com](#)) to distinguish users by Domain

Offers a simple way to identify users in multi-domain environments

“I have a prospect  
who **needs to sync**  
**PaperCut users** from  
more than one GSuite  
domain.”

Logon name

Domain name

UPN:jsmith@papercut.com

Separator

Admins can **sync all users across many domains** without worrying about username clashes or lost print jobs

# How to get it

- ▶ Percolator
- ▶ Get in touch
- ▶ Try it out
- ▶ Share your feedback
