

# INTELLIGENT DOCUMENT SYSTEM WITH AUTONOMOUS AI MODULE

MPS Docs is a web-based platform of a new generation for centralized management of electronic documents, designed to automate overloaded processes in organizations, while at the same time guaranteeing the highest standards of security. The system covers the full life cycle of documents - from their digital entry, through classification and automated workflows, to their long-term archiving. The platform transforms simple file "storage" into intelligent management, eliminating human errors and paper-based exchange of information.

**AI module**

**Automation**

**Security**

**Integration**

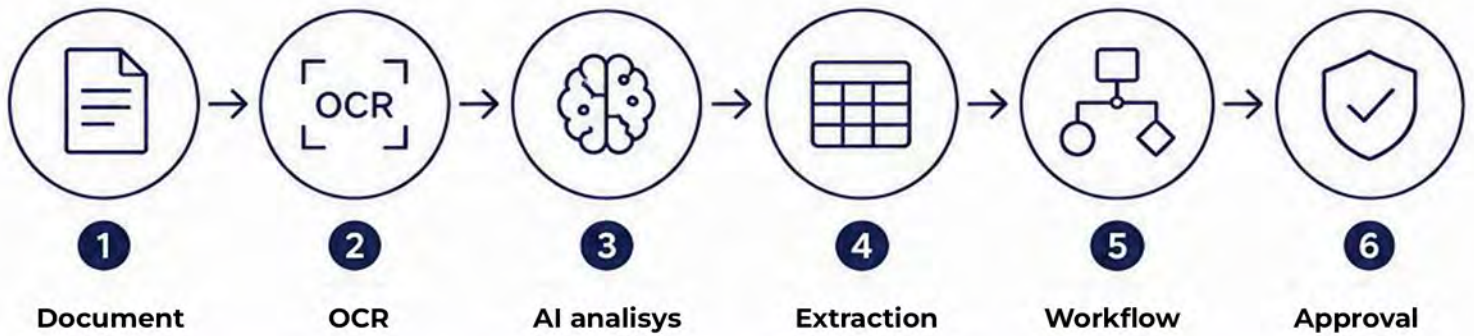

# MPSDocs solutions

Consumers and systems can input documents through the following channels:

- MFP / Scanners - direct scanning and sending from multifunction devices
- Web Page Upload - manual uploading through a fast Drag & Drop interface
- Hot Folder - automatic import when a file is copied into a monitored folder.
- IMAP/POP3 Mail - automatic processing of incoming e-mails and their attached files..
- Printing systems and API - deep integration with the corporate infrastructure.

Traditional document processes require manual entry, review, classification and approval.

**MPSDocs** automates the entire process.

## Result

Faster processing of information, fewer errors and full traceability.

### Less manual work

Automation of routine tasks and data entry.

### Faster processes

Reduced time for processing and approval

### Better control

Traceability, security and compliance at every step.

# MPSDocs Platform

Intelligent AI & OCR module

Specialized AI component combines optical character recognition and large language models (LLM):

**Full text OCR** - transforms scanned PDF files and images into machine-readable and searchable text

**Document Type Detection** - the software itself understands whether the document is an invoice, contract or request.

**Automatic metadata** - extracts amounts, dates, counterparties and UIC without human intervention

**Document Summary** - generates a short text description of the content based on keywords.

01

## OCR and classification

Transformation of scanned documents into structured and searchable information.

02

## AI Extraction

Automatic extraction of data from invoices, contracts and forms.

03

## Intelligent search

Search by content, metadata, history and context.

04

## Workflow

Automation of approvals, notifications and business processes.

05

## Collaboration

Versions, comments, notifications and change control.

06

## Security and audit

Roles and rights, traceability and audit trails.

Less errors

More transparency

Higher productivity

# Implementation plans

For which industries is it suitable?

Thanks to the option for On-Premise Enterprise deployment with sovereign AI (in which there are no calls to external API models and risk of data leakage), MPSDocs is the ideal software solution for strongly regulated sectors:

- Financial and fintech sector
- Healthcare and hospitals
- Legal companies
- Defense and Public Administration (full compliance with GDPR, NIS 2 and national regulations)

Choose the model that suits your organization
